

Custom Molded Precision Musician Plugs™ Hearing Protection

The custom fit and soft vinyl construction provide years of use. The ER-9, ER-15 and ER-25 are now used by professionals in all audio-related fields -- Live performance, sound engineering, recording, critical listening, etc.

ER-9, ER-15 and ER-25 Musicians Earplugs* were designed for musicians and sound engineers as a necessary companion during live performance and recording. Their unique design allows each level of protection to be worn comfortably even during extended periods of high sound pressure levels. Sound is attenuated by specialized filters that provide equal levels of protection at all frequencies.

The ER-9 attenuates (reduces) sound pressure levels by 9dB across the entire sound frequency spectrum at the ear. Levels are reduced by 15dB with the ER-15 and 25dB with the ER-25. 9dB, 15dB and 25dB filters are interchangeable on the same earpiece depending on the application.

"Protect your ears from harm" When accurate listening at safe levels is critical, ER-9, ER-15 and ER-25 Musicians Earplugs help eliminate dangerous SPLs and enhance your listening experience.

The ER-9 has reduced diaphragm stiffness for less attenuation (reduction).

- Reduced attenuation (better audibility) than the ER-15 filter
- For use when a small amount of protection is adequate
- Good frequency response
- 9dB attenuation through 2 kHz

The ER-15 has a diaphragm which functions as an acoustical compliance, as well as an acoustical mass. This results in a smooth and flat attenuation (reduction).

- Practically perfect frequency response
- Provides the same attenuation at all frequencies
- Minimum occlusion effect with deeply-sealed custom earmolds
- 15dB attenuation

The ER-25 has increased diaphragm stiffness and an acoustical mass channel molded into the button for more attenuation (reduction).

- Increased attenuation good frequency response
- Used by drummers and others exposed to high sound levels
- 25dB attenuation

Our Premium Series musician's filtered hearing protection with Etymotics patented pass-through filters allow musicians the ability to hear while playing while still protecting your hearing. Our exclusive musician's filtered hearing protection is made with the highest quality medical grade materials and is packed with exclusive features only available in our products.

- Available in 9dB, 15dB, and 25dB Filtered Attenuation
- Filter Colors Available
- Exclusive comfortable silicon design
- Available With Optional Pull Handles
- Solid or Swirl colors available
- Multi-colored Glitter available (optional)
- Best Solution for Filtered Protection, Comfort, and Reduced Visibility
